D3DC

## Miniature Door Switch

7mm long stroke in a small package

- Providing good contact reliability with wiping movement.
- Operating position marks make stroke settings easier.
- Crimp-type connector offers an easy wiring work and efficiency.
- Snap-fit attachment for easy installation.
- Providing two colors, white and black.

RoHS Compliant

Contact Specifications

Item	Model		D3DC
Contact	Specification		Rivet
	Material		Silver
	Gap (standard value)		0.3 mm
Minimum applicable load (reference value) *			5 VDC 1 mA

* Please refer to the "**Using Micro Loads**" in "●**Precautions**" for more information on the minimum applicable load.

Ratings

Rated voltage	Resistive load
30 VDC	0.1 A

Note. The above rating values apply under the following test conditions.
(1) Ambient temperature: 20±2°C
(2) Ambient humidity: 65±5%
(3) Operating frequency: 20 operations/min

Approved Safety Standards

UL (UL1054/CSA C22.2 No.55)

Rated voltage	Model	D3DC
30 VDC		0.1 A

Characteristics

| Permissible operating speed		0.5 mm to 1 m/s
Permissible operating frequency	Mechanical	30 operations/min
	Electrical	20 operations/min
Insulation resistance		100 MΩ min. (at 500 VDC with insulation tester)
Contact resistance (initial value)		300 mΩ max.
Dielectric strength	Between terminals of the same polarity	600 VAC 50/60 Hz 1 min
	Between current-carrying metal parts and ground	1,500 VAC 50/60 Hz 1 min
Vibration resistance *1	Malfunction	10 to 55Hz, 1.5 mm double amplitude
Shock resistance	Durability	500 m/s^2 {approx. 50G} max.
	Malfunction *1	100 m/s^2 {approx. 10G} max.
Durability *2	Mechanical	100,000 operations min. (30 operations/min)
	Electrical	100,000 operations min. (20 operations/min)
Degree of protection		IEC IP00
Ambient operating temperature		−25°C to +85°C (at ambient humidity of 60% max.) (with no icing or condensation)
Ambient operating humidity		85% max. (for +5°C to +35°C)
Weight		Approx. 2g

Note. The data given above are initial values.
*1.   The given values apply for Free Position and Total Travel Position. Close or open circuit of the contact is 1 ms max.
*2.   For testing conditions, consult your OMRON sales representative.

Operating Characteristics		Model	D3DC-2□ D3DC-3N□
Operating Force	OF	Max.	1.0 N {102 gf}
Total Travel	TT		7.0 mm (reference value)
Free Position	FP		9.5 mm (reference value)
Operating Position	OP	Min.	6.7 mm
Total Travel Position	TTP		2.0 mm (reference value)

Precautions

★**Please refer to "Common Precautions" for correct use.**

Cautions

●**Handling**

• In order to ensure stable contact force for contacts, actuate beyond the recommended operating point (NO contact) and release to free position (NC contact).

• Do not expose the switch to shocks, such as by dropping it. Doing so may damage or deform the switch.

• Do not apply lubrication to the sliding parts. Doing so may result in faulty operation or contact failure.
Correct Use

●**Mounting**

• This product does not have a waterproof or drip-proof construction. Ensure that water does not enter the switch interior.

• In particular, do no use the switch in locations where water may be spilled or flow over the switch. Doing so may result in deterioration of the Switch.

• Also, if the contact is kept open for long period of time, it is recommended to use the Sealed Switch to prevent sulfuration of the Contact.

• Pay attention to the creepage distance/clearance distance for insulation after wiring onto terminal when a mounting frame is made of metal.
Connector

• The terminals connect to JST's XA Connector.
  Contact: SXA-001T-P0.6
  Housing: XAP-02V-1
• OMRON does not sell the XA Connector.
• Contact JST Mfg. for more information on the connectors.

●**Wiring**

• Do not use the Switch with Connector mounted and weight load applied to the Connector and lead wire, otherwise it may rattle or may result in connection failure.

●**Using Micro Loads**

• Even when using micro load models within the operating range shown below, if inrush/surge current occurs, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary.

• The L-level reference value applies for the minimum applicable load.

• This value indicates the malfunction reference level for the reliability level of 60% (λ_{60}). (JIS C5003)

• The equation, $\lambda_{60}=5\times10^{-6}$/operations indicates that the estimated malfunction rate is less than $\frac{1}{2,000,000}$ operations with a reliability level of 60%.
