Pin Functions

Pin No.	Symbol	Description	Pin Voltage	Equivalent Circuit
1	UOUT	3-phase motor driver output		
28	VOUT			
27	WOUT			
3	RF	Minimum potential of 3-phase motor driver output transistor. Constant current control is made through detection of this voltage. The current limiter also functions by detecting this potential.		
22	VCC	Power supply	8 to 13.8V	
26	MCOM	Motor coil neutral point input pin. The coil voltage waveform is detected with reference to this voltage.		
21	UIN	Coil waveform detection comparator input pin. This pin is connected to each phase output through the internal 10kΩ resistor.		
20	VIN			
19	WIN			
18	C1	Triangular wave generating capacitor connection pin. This triangular wave performs soft-switching of the coil output waveforms.		
17	C2			
16	CX	In the VCO circuit, the operation frequency range and minimum operation frequency are determined by means of the capacitor value connected this pin and ground.		
15	VCOIN	VCO circuit voltage input pin. The PCOUT pin voltage is input via CR filter.

Pin No.	Symbol	Description	Pin Voltage	Equivalent Circuit
14	PCOUT	VCO circuit PLL output		
12 13	GND	Ground for all other than the output transistor		
7	BFGO	Motor counter-electromotive voltage detection FG output (single-phase only). Open collector output		
6	FC	Frequency characteristics compensation pin. Insertion of a capacitor between this pin and ground stops oscillation of the closed loop of current control system.		
9	RD	Lock detection output. When motor is running: low-level When motor is locked: high-level Open collector output		
8	CT	Lock protection ON/OFF time setting capacitor connection pin. The capacitor connected between this pin and ground determines the driver ON/OFF time when the motor is locked.
